## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1 and 2 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 recites, inter alia, an automotive charger flashing light array comprised of an automotive charger, a charging circuit, and a transistor, the collector output lead of which is connected to the input pin of the said programmable integrated circuit, with its base connected to the output terminal of a parallel resistance circuit and its emitter connected to the output pin of the said voltage stabilizing integrated circuit as well as the input terminal of the said parallel resistance circuit.

The art of record does not disclose the above limitations, nor would it be obvious to modify the art in such a manner.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rathmann (US 5,955,869) discloses a method for monitoring the remaining capacity of a battery pack with a smart charger and a plurality of LEDs and transistors. Crisp (US 2003/0052651) discloses a battery charger that uses a microcontroller, rectifier, and various filters. Fuji (US 4,786,851) discloses an automobile battery charger with a plurality of LEDs and
